

Here's a document based on the "Tailor App UI Design" project:

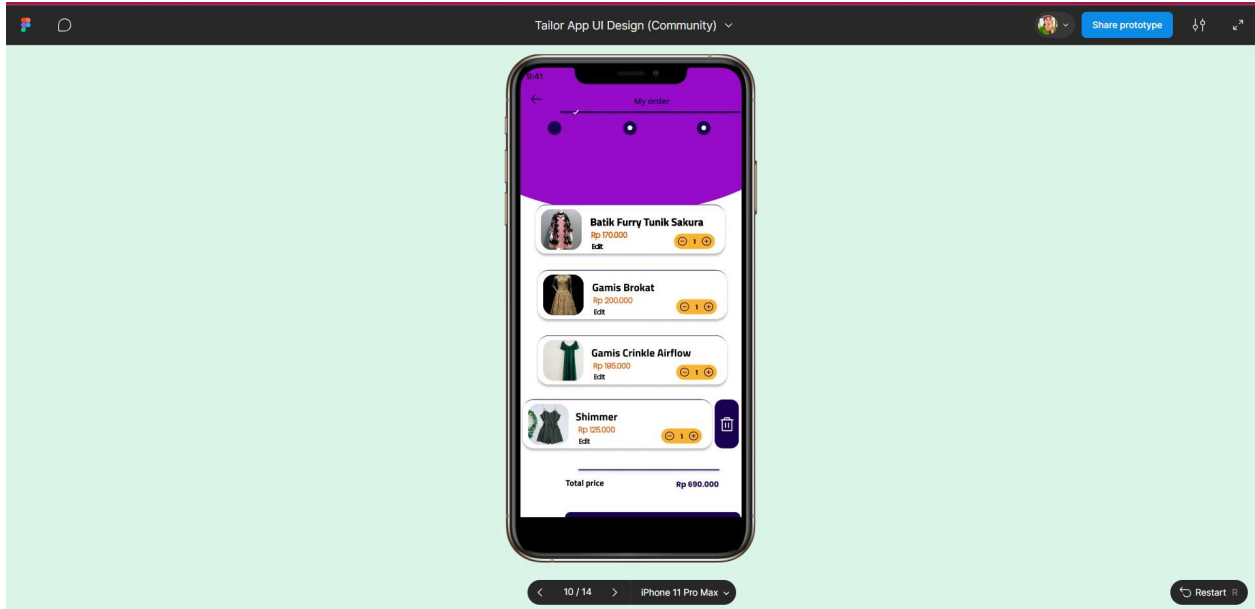

Project Title: Tailor App UI Design

Overview:

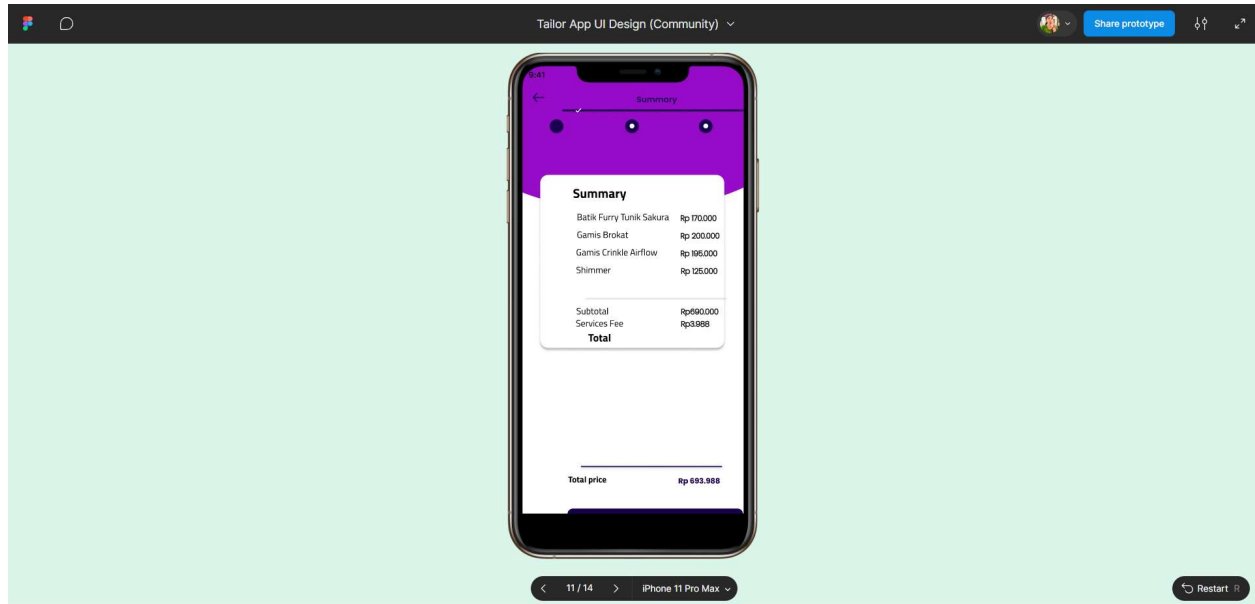

The document is about the user interface design for a "Tailor App". The app appears to connect customers with tailors, likely for ordering custom-made clothing or alterations. The design includes a variety of screens, showing user profiles, item selection, order summaries, and payment details.

Key Features and Design Elements:

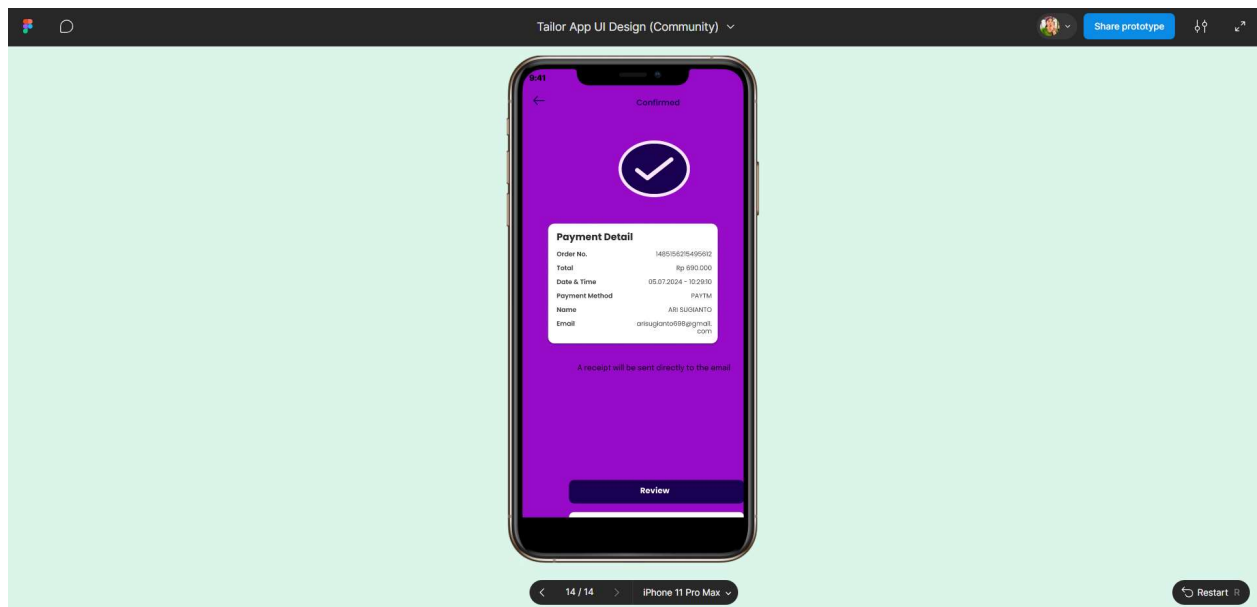

- **User Interface:** The design is modern and uses a purple color scheme. The layout is clean, with a focus on clear typography and easy-to-navigate menus.
- **User Profile:** Screens are included for user profiles, showing details like username, email, phone number, and options to change settings.
- **Home Screen:** The home screen shows recommended tailors ("Penjahit Rekomendasi") and possibly a news feed ("Berita Terkini").
- **Item Selection:** There are screens displaying clothing items (e.g., "Batik Furry Tunik Sakura," "Gamis Brokat," "Gamis Crinkle Airflow," "Shimmer"). Items have images, names, and prices.

- **Order Summary:** The design includes order summary screens, showing selected items, quantities, prices, subtotals, service fees, and total prices.
- **Payment:** Payment method selection and payment details screens are present.
- **Language Options:** There is a screen for language selection.

Target Audience:

Based on the design, the target audience is likely individuals who want to order custom-made clothing or alterations from tailors.

Purpose of the App:

The app aims to streamline the process of connecting customers with tailors, allowing users to browse available items/services, place orders, and manage their orders and profiles.

Additional Notes:

- The design uses a consistent visual style with a purple color scheme and modern typography.
- The app includes user account management features.
- The app supports multiple languages.
